

MyKad-Based Application

Efficient

Features automatic clocking system and real-time data and photo capturing. This electronic data capturing and storing eliminates paper works.

Effective

Visitor data can be retrieved at any time for administration purposes and repeat visit. Allows screening and blacklisting of visitors those do not meet certain criteria.

Accurate

This system is able to capture and retrieve accurate information fast especially when data is downloaded using MyKad.

Secure

Visitor movement can be keep-tracked and monitored, hence ensure security of the premises. System security features multiple access level and administration.

Visitor Management System

Visitor Management System v.2.0, a flexible Windows-based visitor management system, is able to manage visitor database, track visitor's movement and generate reports. This system fits multi-venue environment and suitable for any government offices, industrial and business premises.

Designed for small o large size building areas, it features smart card enabled software that integrates third-party hardware devices, brings you cost effective visitor management system with easy-to-use features and intuitive standalone or client-server based administration.
